INFOFINDER *mobile*

YOUR DATA AVAILABLE ANYWHERE, ANYTIME.

trans**f**inder

WITH INFOFINDER MOBILE YOUR CRITICAL TRANSPORTATION INFORMATION IN ROUTEFINDER PRO IS PORTABLE AND ACCESSIBLE ANYWHERE, ANYTIME.

YOU CAN ACCESS DATA ON STUDENTS; VEHICLES; SCHOOLS; STAFF; TRIPS AND STOPS; AND ALTERNATE SITES WHEREVER YOU ARE AND, IF NEEDED, TAKE IMMEDIATE ACTION.

View data on each school and visualize the location of students and documents associated with that school.

Access reports, select individual trips, see where your buses are, and track actual versus assigned riders.

No longer tethered to your office, you are free to be in the field at anytime and still be able to respond to emails, phone calls, and incidents with the latest and most critical information.

Visualize and Share Data

Easy-to-navigate maps (with satellite layering) enable you to visualize and share data on students, vehicles, trips, and stops.

• Using our Geofinder search tool, you can highlight a selected area on the map and immediately see all the information associated with that particular area. You can then share this with others in the district via email or through a report.

• If you have pre-defined Georegions in your system, such as hazardous or predator zones, you can display them on the map and identify all vehicles, students, stops, and trips affected.

• If your buses are equipped with GPS, you can analyze your planned routes compared to where your buses actually traveled.

Access Reports in Real-Time

Reports stored in your routing system are available in real-time. You no longer need to return to your office to log into your system to access a particular report. You can do this on the spot, saving much needed time and energy.

Document Actual Events

Whether responding to a bus accident, or incident on a bus, or at a stop, you have the information needed to manage and document the event in the palm of your hand.

While at the site, you can take a photo or video, attach it to the affected vehicle, driver, and student files, and email it to local emergency management authorities. You can then notify designated district personnel, parents, or guardians.

If GPS is installed on your buses, you can tell where they are in relation to the incident. You can then alert one or more buses to pick up students at the site, and alert others to take alternate routes to avoid it.

Empower the Entire District

With data at your fingertips, you can share information at Board meetings, enabling the Board to better understand your transportation operation, and thereby, make more informed decisions.

Infofinder *mobile* also allows administrators in the district to access information or reports on their own whenever they need them.

Infofinder *mobile* is available for the iPad®, iPhone®, and iPod touch®.
