A UNIQUE GPS IMPLEMENTATION SERVICE

ROUTEBUILDER IS A UNIQUE GPS IMPLEMENTATION SERVICE FROM TRANSFINDER THAT HELPS YOU EXPEDITE THE IMPLEMENTATION OF OUR ROUTEFINDER PRO TRANSPORTATION MANAGEMENT SOFTWARE FOR MORE ORGANIZED ROUTES AND IMPROVED ASSET MANAGEMENT.

With this hand-held GPS unit, your routes come alive as your drivers drive.

RouteBuilder displays a map with the route the bus has driven with all stops shown. You can easily define and review trips, modify stops, and add on-path and off-path stops.

With **RouteBuilder**, you can:

- Implement Routefinder Pro faster...analyze faster, achieve efficiencies faster;
- Be up and running with minimal effort;
- Optimize routes for time or distance;
- Get the benefits of GPS without the capital expense of outfitting your buses;
- Generate route sheets on your first day;
- Observe where buses are traveling, where drivers are stopping, and when stops are occurring.

The Power of RouteBuilder

As a new and exclusive service from Transfinder, RouteBuilder may very well revolutionize the industry's approach to implementing routing software. With little training and no major investment in GPS hardware, you create your routes from raw GPS data. No other routing software company gives you the ability to automatically create routes as your drivers drive.

Transfinder provides your district with a set of hand-held GPS units, which you then give to your drivers to track their actual routes as they drive. At each stop your drivers press one button. When the drivers come back, with a few clicks, you can view your routes through the RouteBuilder interface. When you return the units to Transfinder, our implementation team works with you to ensure your success.

Personalized Implementation and Training

We assign an Implementation Coordinator as your main contact during product implementation and training. This ensures that we meet your needs with personalized service at every step.

An Applications Specialist conducts one-on-one training sessions at small intervals to help you not only absorb information, but also to give you the time to practice integrating this knowledge into your daily operations. In addition, a GIS/Data Engineer will assist with acquiring and converting your data.

This team approach combined with dedicated technical support is a hallmark of Transfinder's commitment to help all clients succeed.

Keeping it simple

If you are considering a software solution to minimize driver issues and phone calls, as well as the paperwork associated with a manual approach, RouteBuilder is your answer. With RouteBuilder you can immediately realize the benefits of GPS and the power of Routefinder Pro to analyze actual routes and adjust your plan for optimal performance. This enables you to not only be up and running in record time, but also to be operating very efficiently.

Improving the bottom line

If you are already benefiting from Routefinder Pro as an existing customer of Transfinder, but do not have GPS installed on your buses, you can use RouteBuilder to analyze actual vs. planned routes, and make adjustments to trips to optimize them for time or distance.

The bottom line is you will save money in weeks, not months or years, by:

- saving time;
- reducing mileage costs;
- eliminating hardware costs.
